

### **142 Human Genetic Disorders Answer**

A race is a grouping of humans based on shared physical or social qualities into categories generally viewed as distinct by society. First used to refer to speakers of a common language and then to denote national affiliations, by the 17th century the term race began to refer to physical (phenotypical) traits.

# A TATA box (sometimes Goldberg-Hogness box) is a conserved sequence found in the promoter region of some genes in eukaryotes and archaea. It is responsible for the binding of transcription factors or histones (the two are antagonistic) and is usually located approximately 25 base pairs upstream of the coding region.

Cytochromes P450 (CYP) are a major source of variability in drug pharmacokinetics and response. Of 57 putatively functional human CYPs only about a dozen enzymes, belonging to the CYP1, 2, and 3 families, are responsible for the biotransformation of most foreign substances including 70–80% of all drugs in clinical use.
